

A small snail is crawling on a green leaf in the upper left corner of the image. The background is a soft-focus green field of leaves.

Healthy aging is possible!

With a natural product, known since ancient times
extract from plants!

Our active product protects and promotes telomere
elongation, hence the name "**TELOBOOSTER**"

Enjoying his retirement in good health for as long as
possible!

See grow its children and even great grandchildren,
Living life, other than in a wheelchair or bed

IT IS NOW POSSIBLE THROUGH TELOBOOSTER!

HOW IS THIS POSSIBLE?

- Telomerase is the main agent of protection of telomeres during cell division. Recent tests, especially on mice, have shown the effectiveness of certain plants, while determining that these plants have no carcinogenic effect.
- Scientific evidence has established that the TELOBOOSTER maintained telomere length throughout the aging or lengthening the telomeres in human cells.

HOW DOES THE TELOBOOSTER WORK ?

Telomeres are the ends of chromosomes and have a vital role in protecting their integrity. Telomeres are formed by tandem repeats of a DNA sequence which is conserved throughout evolution.

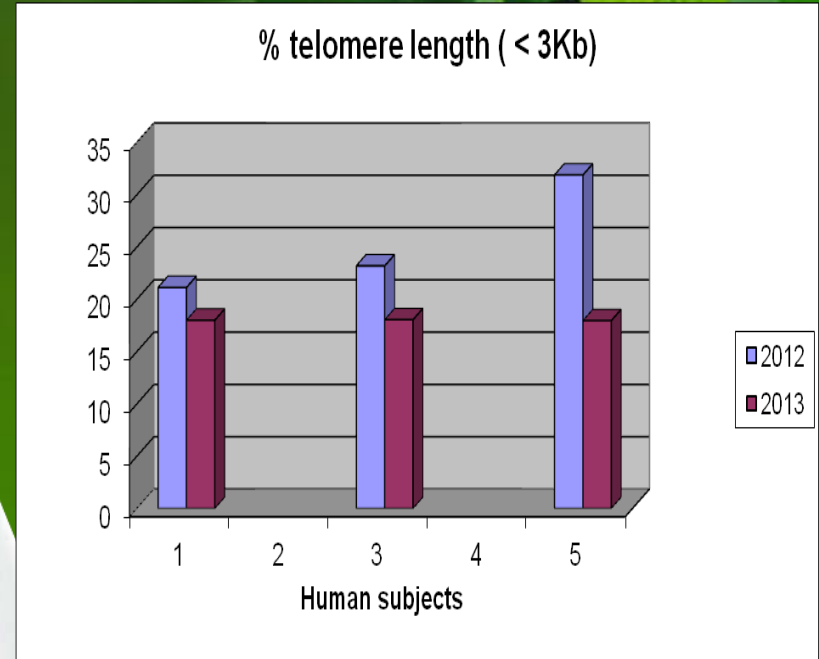

The function of telomeres is to protect chromosome ends from erosion and DNA degradation activities to ensure the proper functioning and viability of cells. Telomerase is an enzyme that is capable of maintaining telomeres length and repair short telomeres. Healthy cells generally produce little or no telomerase and, thereby, telomeres shorten gradually during successive rounds of cell division, until they reach a critical length that triggers cell death or senescence.

TELOBOOSTER promotes the protection of telomeres and, according to numerous scientific studies, contributes significantly to extend the life of cells.

EXPERIMENTAL RESULTS

- After a year of daily use of our natural nutrients all the results show the same increase in telomere length for all humans. This is the percentage of cells which telomere length is less than 3 kb which is significant aging. In all cases studied this percentage decreased from one year to the next.

TELOBOOSTER EFFECTIVENESS

Although telomere length decreases with age in the life of every day, all humans belonging to our group found an increase in telomere length after one year of treatment with our blend of natural products.

According to scientific literature, this means that all humans belonging to our group have increased their life expectancy after only one year of treatment.

- It is important to note that recent studies have correlated the likelihood of developing certain types of cancer and the presence of short telomeres in humans. Most of all the **TELOBOOSTER** helps protect telomeres, thereby increasing telomere length. According to this work, **TELOBOOSTER** diminishes the appearance of certain types of cancer.
- Finally, **TELOBOOSTER** is composed entirely of natural plant extracts known since the dawn of humanity.
